

NSVGALOCK

NEWSTAR VGA LOCK, 2 METER CABLE

The NSVGALOCK is a 2 meter security cable with digit lock. Perfect to secure notebooks, PC's, projectors or LCD/TFT screens.

NewStar's VGA Lock, NSVGALOCK, allows you to secure all hardware using a VGA port. This brand new system prevents theft of your valuable hardware using a super strong steel cable with number lock. The cable is attached to your VGA port and your desk preventing easy theft. The VGA lock splits your VGA port allowing you to keep using the VGA port opposite to other systems in the market.

Most systems in the market use easy to disconnect systems with glue that can easily be taken off your hardware. By using this new system the thief has to brake your VGA port. After braking the VGA port, the PC, monitor or Beamer is useless and hard to sell. Thief's will think twice stealing hardware using this unique VGA LOCK!

Act now! Protect your hardware with this VGA LOCK and decrease theft!
